- Why not choose a Weather Science Experiment to do at home using the link below? You may record a video, explaining your findings and upload it to Google Classroom / J2E / Twitter.

- Can you keep a daily record of the weather for a week? You can use a thermometer to measure the air temperature or create your own rain gauge to measure rainfall. How about creating a bar or line graph to demonstrate your findings?
- Water remains unclean in many places around the world. Can you create a water filter, using recycled materials, and explain how you have done this?
- Can you research and create a poster about a religious relation to the weather i.e a religious story or 'Weather Gods'.
- Why not research the climate of two countries? Display and compare your findings by creating a table.
